

PRINTING AT HOME

Not all at-home printers are capable of printing on card stock. Always check your instruction manual for the weight range your machine can handle. Most printers can handle 65 lb and 80 lb sheets.

TIPS FOR PRINTING AT HOME

DO A TEST RUN

Test print runs give you a chance to see how your chosen card stock prints in your machine. They also give you an opportunity to troubleshoot and correct any printing issues.

HAND-FEED SHEETS

For thicker sheets, try hand-feeding them into your printer for a smoother, more professional outcome.

USE A REAR-FEED OR TOP-LOADING PRINTER

Bottom- or front-feed trays can damage card stock because the paper has to move through tight spaces in order to flip over inside the printer. This can cause sheets to develop a permanent curvature. Rear-feed or top-loading printers can help you avoid this issue.

ADJUST PRINT SETTINGS

Adjust your printer's settings to reflect the size and weight of card stock you are printing on.
